

CM SERIES BRASS CABLE MARKERS

Brass Cable Marker — "Danger Electric Cables" — 75mm x 75mm Square Plate

CM6-S

Part of Cableaway's CM range, this solid brass cable marker gives a permanent, highly durable warning at ground level wherever a service route needs to be flagged for anyone digging, trenching or working nearby. The plate is engraved "DANGER ELECTRIC CABLES" with a directional arrow, and gives a high-visibility hazard warning for live electric cables, for use where extra caution is required near excavation. Manufactured as a rigid 75mm x 75mm square plate, it resists corrosion, fading and physical wear far better than painted or plastic alternatives. Two pre-drilled fixing holes allow quick, secure mounting to posts, pits, walls or other fixed structures along the cable route. Because the wording is engraved rather than printed, the marker stays legible outdoors for decades — making it a one-off investment for asset protection and safe-digging awareness on any site.

TECHNICAL SPECIFICATIONS

Part Number	CM6-S
Product Range	CM Series
Marker Shape	Square Plate
Plate Size	75mm x 75mm
Material	Solid Brass
Engraved Wording	DANGER ELECTRIC CABLES ▼
Fixing	2 × Pre-Drilled Holes
Finish	Natural Brass
Custom Wording	Available on request

MARKER SIZE

75mm x 75mm square brass plate, complete with pre-drilled fixing holes	
PLATE SIZE 75 mm sq.	FIXING HOLES 2

KEY FEATURES

- Solid brass — corrosion and weather resistant
- Engraved wording stays legible for decades
- Compact 75mm x 75mm square plate format
- Two pre-drilled holes for fast, secure fixing
- Down-arrow shows service is directly below
- Rigid plate — more durable than printed labels
- Part of a coordinated CM marker range
- Custom wording and sizes available on request

TYPICAL APPLICATIONS

Electrical cable routes	Data / comms cabling
Utility easements	Substations & switchyards
Civil infrastructure sites	Commercial estates
Data centre grounds	Transport corridors

INSTALLATION & CARE

Fix directly to a wall, post, pit lid, pillar or other permanent structure using the two pre-drilled holes and corrosion-resistant screws or brass fasteners. Position at a clear, visible height along the cable or service route, at direction changes, and at each termination point, so the marker is legible without obstruction. Clean periodically with a soft cloth; avoid abrasive cleaners which may wear the engraved lettering over time.

Compliance & Notes: Cable markers are a supplementary identification aid and do not replace formal service location records — always follow Dial Before You Dig / local utility location procedures before excavating near marked routes. Engraved wording and layout shown are indicative; custom wording, logos and plate sizes are available on request (minimum order quantities or values may apply). Cableaway reserves the right to alter specifications without notice.
